INTRODUCTION

This technical information applies for all Best Foam™ machines.

NEW FUNCTIONS AND FIXED ERRORS

The following is an overview of the new functions and fixed errors:

New functions:

- New beverage icons.
- New menu for telemetry and accounting.
- M2M telemetry functions integrated.
- Steam boiler rinse integrated.
- Other standard beverages stored in the software.
- New language - Greek.

Fixed errors:

- Mixer and vales are now correctly controlled when product is terminated.
The mixer is emptied and the valves do not remain switched.
- Machine no longer blocks if the "Water tank full" message is active.
- Beverage is not dispensed despite displayed dispensing window.
The error is fixed.
- MDB accounting optimised.
- Functions of the automatic beverage outlet optimised.
- Parameters dependent on a superior parameter are correctly displayed.
The menu does not have to be reopened.
- The booster functions correctly during beverage programming.

Telemetry/Accounting menu

All relevant options regarding telemetry and accounting are now summarised in the "Telemetry/Accounting" menu.

M2M telemetry

The M2M Coffee Link telemetry is integrated with the new software. This enables communication of the machine with the M2M Coffee Link online portal.

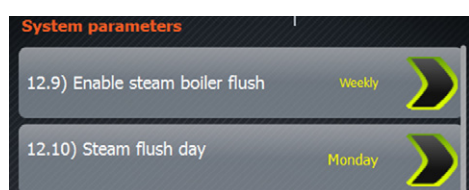

For more information on telemetry, please contact Schaefer AG.

Steam boiler rinse

To reduce the deposit of minerals in the boiler, a steam boiler rinse has been integrated. If activated, it rinses during the automatic cleaning process of the steam boiler.

NOTE

The machine must be absolutely be descaled before activating the parameter. If the boiler is descaled with the steam boiler rinse activated, the function of the machine can be impaired.

The steam boiler rinse is activated after an update in the "System parameter" menu. Daily and weekly steam boiler rinse is available for selection. If you want the cleaning process to happen on a certain day, this can be set in the "Steam cleaning day" parameter.

With new machines and after a master reset, the function is automatically activated and is automatically triggered on Monday.

Beverage recipes

All standard beverages are stored on the machine with software version 1.23. Only fine settings have to be made after creating the beverage.

Beverage icons

New beverage icons are available (set 3) with the new software. These can be activated in the "Configuration TouchIT" menu. The new icons facilitate differentiation between the various cappuccino and milk beverages, since for example, the mountain of foam for the Fujiyama is now clearly pictured in the icon.

NOTE

The Fujiyama and Fujiyama light beverages must be recreated so that the beverage icons are correctly displayed.

These must be recorded so that the set values do not get lost for the existing beverage. Then delete and recreate the beverage. Enter the set values.
