Change of Coolant R600a – Part 1
Type 9022, 9190 and 9192

Dear colleagues,

Based on the EC regulation no. 517/2014 the placing on the market of the current coolant R134a included in our milk coolers and Cup&Cool will be prohibited as of the end of 2021. As of 01/01/2022 cooling units with this coolant must no longer be sold in the EC – the use and operation of already installed devices in the EC, however, will still be allowed beyond that date.

Consequently, all milk coolers and Cup&Cool will be changed to another coolant (R600a).

Neither will this change affect the appearance nor the price of the products in the existing portfolio. The change is mainly reflected in the change of the indications on the type plate and the indexes of the item numbers.

The change will be processed in several steps:

1st step – already done:

- WMF 10l Center Cooler (Type 9022):
Since series start fitted with R600a
The following variants are available:

Item number	Description
03.9022.6041	10l cooler <u>EC</u> with empty message and temperature sensor
03.9022.6051	10l cooler <u>EC</u> without empty message with thermostat
03.9022.6061	10l cooler <u>EC</u> 2-milk without empty message with thermostat
03.9022.6141	10l cooler <u>China</u> with empty message and temperature sensor
03.9022.6151	10l cooler <u>China</u> without empty message with thermostat
03.9022.6161	10l cooler <u>China</u> 2-milk without empty message with thermostat
03.9022.6241	10l cooler <u>Japan</u> with empty message and temperature sensor
03.9022.6341	10l cooler <u>USA</u> with empty message and temperature sensor

2nd step – changed as of now:

- WMF countertop cooler 3,5l (Type 9190):
The following variants will be available as of now with new coolant:

Item number old	Item number new	Description
03.9190.0001	03.9190.0003	3,5l cooler <u>EC</u> without sensor
03.9190.5001	03.9190.5003	3,5l cooler <u>EC</u> with thermostat

- WMF countertop cooler 6,5l (Type 9192)
The following variants will be available as of now with new coolant:

Item number old	Item number new	Description
03.9192.6011	03.9192.6013	6,5l cooler <u>EC</u> without sensor
03.9192.6021	03.9192.6023	6,5l cooler <u>EC</u> with empty message and temperature sensor
03.9192.6041	03.9192.6043	6,5l cooler <u>EC</u> with empty message and temperature sensor left/right

In this process the above mentioned „new“ item numbers will be released which have to be entered from now on. Already existing orders of the “old” item numbers will be supplied – subject to availability – and afterwards automatically changed to the new number. The internal sales team will be provided with an overview of remaining stock of the herewith discontinued item numbers in order to clear our stock.

After the EC variants, other variants for further countries will be changed to R600a.

3rd step – change in progress:

- 9,5l cooler (Type 9468 and 9469); currently in approval process
- Cup&Cool narrow and wide (Type 9021); currently in approval process

All further variants/item numbers of the already changed cooler types will be discontinued in this context.

With kind regards
Thomas Ege
